

Hyaluronic acid

Hyaluronic acid is a linear polysaccharide of high molecular weight, naturally occurring in the human body including the skin. It is an excellent moisturizer creating a hydrating film on the skin. Hyaluronic acid improves skin barrier function and prevents penetration of air pollutants into the skin. Recent studies show that it also serves as skin prebiotic supporting normal skin microbiome equilibrium.

- ✦ Excellent moisturizer
- ✦ Skin barrier reinforcement
- ✦ Anti-pollution properties
- ✦ Skin microbiome support
